

Fenol nanopeel is used as a skin resurfacing technique. It is a deeper peel that allows new, healthier, skin to emerge. It is specially formulated to treat sun damaged facial skin & fine lines. Its bleaching effect renews the face in a few treatments and leaves your skin clearer & younger

What is fenol peel?

A fenol peel is a deep peel that is sometimes recommended for treating severe wrinkles (from fine lines to deep creases), sun damage, uneven skin tone, and texture and may be used in the treatment of precancerous skin conditions.

How Does fenol peel work?

Being the strongest in the chemical peel spectrum, fenol peels are known to bring in the best and most long-lasting results. The chemical works its way deep into the skin and gets rid of all dead skin cells, thereby giving way to new wrinkles and blemish-free skin to the surface.

How long does it take to recover from a fenol peel?

When recovering from a fenol chemical peel it will take at least 2 weeks for new skin to form. It is common to experience severe swelling and redness during the first week of recovery as well as skin crusting and peeling. Initial recovery is usually complete after 2 weeks although it may take longer.

For how long is it forbidden to expose the treated area to the sun?

After the first session of deep fenol peel treatment, you have to take total sun protection for 4 to 6 months.

fenol mild cocktail peel

8% Phenol acid
3 X 0.67Fl. oz. 3x20 ml
