

Hexylresorcinol glycolic kojic combination nanopeel is specially formulated for skin lightening. Its powerful bleaching effect clears the face in a few treatments, leaving the skin clearer, brighter & more youthful.

Hexylresorcinol citric kojic combination nanopeel is formulated for skin that tolerates hexylresorcinol to treat active acne, rosacea and pigmentation. It also improves under eye dark circles.

What is resorcinol peel?

Resorcinol is a derivative of phenol and has been used in treatments for peeling for almost 150 years.

How it works?

Resorcinol works by disrupting the hydrogen bonds in keratin, so it is primarily used for addressing pigmentation.

Precaution measures could be?

Resorcinol has been associated with side effects such as myxedema, thyroid dysfunction and cardiac arrhythmia; therefore, it is highly recommended that allergy testing is performed before using resorcinol as a peeling agent.

After care?

Do not remove any of the dry, dead skin with any sort of rubbing, peeling or pulling during the peeling process. Safe exfoliation can be done as soon as the skin is no longer hypersensitive.
