

Whitening Glutathion + vit C PRO ampoules are highly sterile, readymade cocktails that are helpful for overall body whitening effect. The procedure is performed by experienced professionals and dosage is delivered intravenously.

Does glutathion lighten skin permanently?

Its whitening effects are permanent only if you will maintain it (by avoiding exposure to sunlight). You won't go back to your original skin color even if you stop taking IV. However, there is a tendency for you to be tan or darken your skin if you expose yourself to sunlight and other harsh elements.

What glutathion does to your body?

Glutathion acts as an important antioxidant in your body. That means it helps combat free radicals. Glutathion plays a role in many chemical reactions in your body.

What are the benefits of IV glutathion ?

Improving immune function and helping to fight disease. Lightening and brightening the skin by erasing hyper-pigmentation and inhibiting melanin production in cells. Reducing inflammation. Helping your body break down and purge fat. Keeping your body from becoming resistant to drugs. Promoting high energy and mental clarity.

Is glutathion IV infusion therapy better than oral supplements?

An IV infusion of glutathion delivers the powerful antioxidant directly into your bloodstream, bypassing the digestive tract where adequate absorption is not a guarantee. Each patient has unique body chemistry, age, and health which will affect the rate at which nutrients are absorbed into their system. Once in the bloodstream, glutathion is carried throughout the entire body, including the brain, heart, lungs, and muscle tissue, so your cells can benefit from glutathion's detoxifying and protective properties. Simply schedule a consultation with one of our providers at Remedy Pain Solutions if you are interested in IV infusion therapy of glutathion or several other vitamins and nutrients.

Are there any side effects of glutathion treatment?

Several studies have linked long-term use of glutathion supplements to low zinc levels, and patients consuming the nutrient orally have reported digestive distress including abdominal cramps and bloating. Intravenous (IV) glutathion infusion bypasses the digestive tract altogether, delivering the master antioxidant directly to your cells. The vast majority of patients receiving (IV) glutathion treatment have no side effects at all. If you are pregnant or breast feeding, it is best to check with your doctor at Remedy Pain Solutions prior to infusion.

whitening glutathion PRO Glutathion + Vit C

5 ml / 0,17 Fl. Oz x 10 ampoule

Phototypes I-VI

Indication

Whitening Effect

Ingredients

Aqua / Water, Glutathione, Sodium Ascorbate, Sodium Chloride, Sodium Hydroxide.
